“Only two months ago, I thought I would never place implants in my practice. After taking the Implant Immersion course with hands-on training in Puebla, Mexico, I am more excited and confident than ever. In Mexico, I was able to immediately apply what I had learned the weekend before with help right by my side. Having a CBCT available to plan cases and review our results was a great way to learn. The BAM Center is very clean and comfortable, and the food was awesome! The clinical instructors at this course are amazing! I would repeat this course in a heartbeat!”

“I have attended many seminars through the years. This one was special. To say we were well taken care of is an understatement. Airfare and accommodations (for the hands-on portion) were included in the cost of the seminar. All we had to do was show up at the airport. They handled the rest. How great is that? The hands-on portion of the course was held in the same building as our hotel rooms, just on a different floor. Everything was self-contained. We ate, worked, and learned there. This facility was a big part of what made the course great. The food was excellent and we roomed with other course participants, which greatly enhanced the learning environment and helped to instill a wonderful atmosphere of camaraderie. The dental facility was top notch and the equipment excellent. The first morning of the hands-on portion of the course, everyone placed at least one implant and it just went from there. CBCT scans were used pre-, intra- and post-op for treatment planning and evaluation of every case. Be warned that at the end of every day, you will be exhausted from all the information and clinical experience you will be soaking up. I have had experience placing implants, and without a doubt, this course will help me get to the next level. Everyone else in the course had never placed an implant. If you have never placed an implant, but want to start providing the service, this is a golden opportunity. I cannot say enough about this course. This is one of the best I have ever attended, and may be the best ever because of the hands-on nature of the course. You can talk about or watch an implant being placed a hundred times, but until you place one on a live patient, none of that matters. Everyone who was a part of putting on this course did a fantastic job. Thanks to all of you!”

"The Implant Immersion course was the type of course I have always wanted to take for implant training. Being able to follow two days of classroom learning, and then immediately spending three full days applying that knowledge clinically, was ideal. There was exposure to both simple and complex cases, including: how to create a treatment plan, the complications that may be encountered, and how to properly address those problems. The instructors are knowledgeable, helpful and approachable . . . even after completing the course. I finished the course with the confidence that I had the knowledge and skills to place implants. I placed my first implants in my office one week after finishing this course. It was the best continuing educational experience and investment I have made in 34 years of practice. When my nephew graduates this summer and joins my practice, it will be the first class I send him to attend."

"I wanted to thank you for the experience of a lifetime. I have been a dentist for 20-plus years and was nervous about learning how to do implants and incorporating them into my practice. I see the shift with implants as being the new standard of care and I wanted to be on board. You made this course ideal for each of us students, all with various years of experience. I am amazed at how simple and fun it is to place implants. My fear is gone and replaced with confidence. My patients will greatly benefit and appreciate this type of care that I am now able to provide. Many of my patients just won't go see a specialist for implants, so they lose out, but not anymore."

"I have always told myself that I would not do implants and would just stick to all other aspects of general dentistry, as I believed it would be too hard for me, and better done by a specialist. When I heard about this course and about the one-on-one guidance and instruction, I decided to give it a shot. It has by far been the best decision I made. The course was above and beyond what I expected. The instructors are awesome, personable, and very encouraging, and I learned so much more than placing implants. I got to place implants and they were right there guiding me every step of the way. They don't leave you hanging in the dark, but continue to provide guidance even after the course. Also, in the process, I made some wonderful friends. I can now proudly tell my patients that I place implants, not just restore them. Take this course; you will not be disappointed. "
